**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by USPN 435708 to Poole.

1. Poole discloses an anti-scaling device comprising a hollow central body portion (d, d') for mounting on a bar (e) around a transverse axis (void between bottom of d and top apex of e) and several spike units (2) extending outwardly from the body portion in different directions wherein the spike units are rotatably mounted on the central body portion around axes (through c) non-congruent with the transverse axis.

2. Poole discloses that the spike units are detachably mounted on the central body portion.

3. Poole discloses that there are pairs of spike units (2 on either side of d') disposed in a diametrically opposed relationship relative to the central body portion.

4. Poole discloses that the central body portion has spigots (c) for mounting the spike units.

5. Poole discloses serrated webs (7) extending outwardly from the central body portion between the spike units.

Art Unit: 3679

6. Poole discloses that the serrated webs extend along radial axes (fig. 2, radial axis from center of c out to 7) displaced 45 degrees from the radial axes (along 2) of the spike units.

7. Poole discloses that rows of sharp-edged teeth (3) are axially aligned along the central body portion (c).

8. Poole discloses that the spike units are in the form of partially rotatable serrated propellers.

9. Poole discloses that the spike units are pivotably mounted.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 435708 to Poole.

10. Poole discloses that the device is molded from a plastics material.

It has generally been recognized that selection of a known material based upon its suitability for the intended use is a design consideration within the skill of the art. In re Leshin, 227 F.2d 197, 125 USPQ 416 (CCPA 1960). The use of plastic instead of metal for fence components, such as anti-scaling devices, is very well known. Therefore, it would have been obvious to one with ordinary skill in the art at the time the invention was made to use a plastic

material to construct the anti-scaling device of Poole, as such practice is a design consideration within the skill of the art.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Victor MacArthur whose telephone number is (703) 305-5701.
